**Example**—If point is 22.6 ft. above grade, how far should it be from center line to be a slope stake point? Ans. from Table 30.6. For same slopes but other widths of roadbed, correct above figures by one-half difference in width of roadbed; thus in example above, for 20 ft. roadbed distance will be  $30.6 + (20 - 16) \div 2$  or 2 ft. added to  $30.6 = 32.6$ . For slopes of 1 on  $1\frac{1}{2}$  see inside of back cover.

Copyright, 1914, by Eugene Dietzgen Co.

The paper stock of this book is made of a **high grade 50% rag paper** having a **water resisting surface** and is sewed with **Bing Special Enamel Waterproof Thread**.
