DIRECTIONS FOR USE OF TABLES

TABLE No. 1

Distance of slope stake from side or shoulder
 stake for any width roadway, slope 1 1/2 to 1.
 If ground is nearly level, the cut or fill at side
 stake is located by the double entry method in
 left column and top row. The number in both
 of table in same row and column gives distance

level estimate the difference in elevation between

INFORMATION

TABLE No. 2

To find a tangent and distance for curve of
 any other degree, divide by degree of curve and
 add correction found in column of corrections.
 Degree of curve with a given L may be found
 by dividing tangent (or external), opposite L by
 given tangent (or external).
 The distance from a point on the tangent to
 the curve is very nearly the square of the tangent
 length divided by twice the radius.
